RESPONSE TO U.S. EPA REQUEST FOR MODIFICATIONS

MODIFICATION

All sampling and analysis must be performed in accordance with the U.S. EPA-approved Quality Assurance Project Plan (QAPP). Any required revision to the QAPP should be submitted to U.S. EPA for review and approval. The on-site laboratory may only be used for screening and not used for any samples that are required to be collected under the work plan for this removal.

RESPONSE

All HSL analysis shall be performed by the FMPC RI/FS laboratory which is identified in the U.S. EPA approved QAPP. CLP packages will be obtained from the FMPC RI/FS approved laboratory. In order not to delay this project, radiological screening of samples for Gross Alpha, Beta and Gamma will be performed at the FMPC site laboratory. Ten soil samples, representative of the total sampled area, will be screened using ICP Mass Spectrometry at the FMPC site laboratory.

RESOLUTION

See Attachment 3, Sample Collection/Analytical and Shipping Requirements, Page 2.
